DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

Crop: Citrus Crops: Including, but not limited to: Grapefruit, Lemons, Limes, Oranges

Diseases: Citrus Canker

CHEMIGATION FOR CONTROL OF FOLIAR PLANT PATHOGENS

Apply SaniDate HC through a chemigation system to prevent foliar plant pathogens and their associated diseases.

Apply SaniDate HC through center pivot, lateral move, end top, side-wheel roll, traveler, solid set, micro sprinklers or hand move irrigation systems. Use SaniDate HC at the time of seeding or transplanting, as well as a periodic treatment throughout the plant's life. Multiple applications can be made, as there is no mutational resistance with this product.

APPLICATION RATES BY CHEMIGATION:

1. Begin preventative applications prior to optimum disease development.
2. Inject SaniDate HC at a dilution rate of 1:33,300-1:1,660 (4.0-77.0 fl. oz. per every 1,000 gallons of water; equivalent to approximately 10-200 ppm of peroxyacetic acid).
3. Apply in 2,000-10,000 gallons of water per acre.
4. Applications can be made continuously or during the last 30-120 minutes of the irrigation cycle.
5. Maintain a 3-10 day application schedule. Applications can be made up to the day of harvest.

Refer to the **CHEMIGATION** section on the SaniDate HC product label for additional directions and precautions.
